## REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The closest prior art of reference found were the combination of teachings by Tang et al. (US 2003/0026957) in view of Nishi (US 6,451,143).

Tang et al. teach decorating a plastic substrate with a porous, image-receiving layer comprising a film-forming polymeric binder to bind inorganic pigments to be used as matting agents, such as silica (abstract; paragraphs 0002, 0019, 0024, and 0037). The image-receiving layer is carried by a release sheet to form an image transfer layer (paragraphs 0025 and 0028). First, a mirror image of a desired image or character is printed on the image-receiving layer by an imaging device, such as an inkjet printer (paragraph 0036). The image transfer layer is laminated onto a substrate, and the releasable sheet is peeled resulting in an imaged substrate. (paragraphs 0041 and 0042). Nishi further teaches placing a transparent UV reactive hardening resin (7) after graphic printing (9) on the back of the resin key top, then irradiating the key top under UV rays (column 3, lines 17-19; column 5, lines 21-28; Figure 2).

However, there is no prior art of reference found that teaches curing a transparent resin layer onto an image transfer layer, prior to transferring both the resin layer and image transfer layer onto a substrate.

## Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
